

Description

Defining the amount of energy available in a battery is a complex task since battery age, discharge current and temperature all influence the actual battery capacity. All Expert battery monitors are equipped with high performance measuring circuits, which in combination with complex software algorithms, are used to exactly determine the remaining capacity of your battery.

The Expert Modular is our latest generation, highly advanced battery monitor. It consists of an intelligent shunt and a remote control and display unit. The shunt has a Grid Optimized footprint for perfect integration with our DC Modular products.

This advanced battery monitor not only shows the true state of charge of your battery system. It also offers a large amount of additional features to optimally supervise your battery system and control external equipment.

The Expert Modular is compatible with lead based and Lithium batteries (LiFePO4). This battery monitor can monitor up to three battery banks.

The inputs for battery bank 2 and 3 can also be configured for other purposes, like midpoint voltage measurement, keyswitch input, setup lock or backlight control. The Expert Modular can measure DC currents up to 600Amps (500Amp continuous) and voltages up to 70Vdc.

So any lead- or lithium based battery bank from 12V up to 48V can be monitored.

The installation time is minimal, requiring only one supply wire to the intelligent shunt base and a single 'QuickLink' cable between the shunt base and the control/display unit (CDU).

Additionally, the battery minus cable must be interrupted in order to insert the shunt into the high current circuit.

The fused supply wire and the QuickLink cable are both included in the package, avoiding the need for a separate connection kit.

Features

- Read your battery bank like a fuel gauge
- Provides critical information about the status of your battery bank
- Very simple 'plug and play' installation
- Displays voltage, current, consumed amphours, remaining battery capacity, time remaining and power
- Extensive alarm programming capability
- Three battery inputs
- Large display with backlight
- Very small installation depth of display unit

- Programmable alarm relay
- Perfect integration with TBS DC Modular products
- QuickLink communication port
- History event storage
- Active shunt supports two display units or can also run stand alone
- Splash proof front panel of display unit
- CE and automotive certified (EN50498)
- 24 month warranty

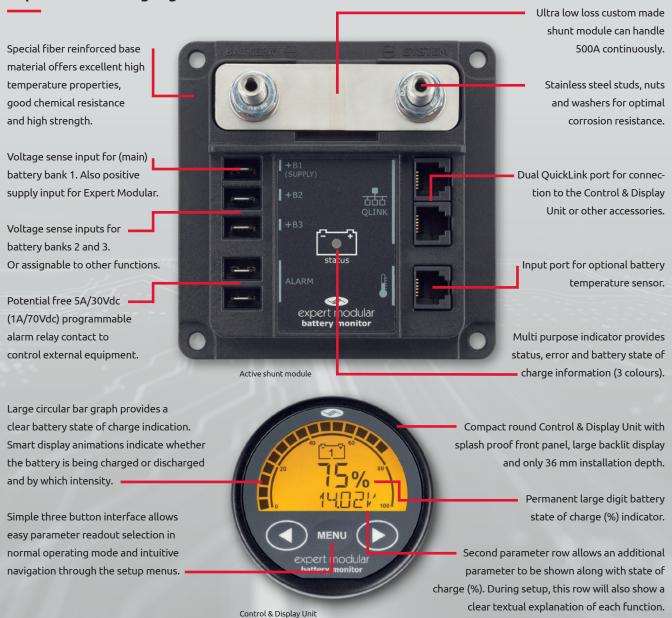

Applications

- Electric Vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Electric forklifts
- Mobile entertainment systems
- Service vehicles
- Recreational vehicles
- Remote sites

Standard included active 600A shunt

Expert Modular highlights

Expert Modular readout examples

Standard view The image above shows the normal operating mode with the second parameter row disabled. This results in a clean display area that only shows the battery state of charge (%) and the bar graph. A perfect mode for less technical end users.

Second parameter row

By enabling the second parameter row, the user can scroll through the following battery parameters: Volt, Amp, Ah, time remaining, temperature and Watts. The second parameter row can be set to automatically hide after a while, or to stay present permanently.

Easier setup During function setup, status or history readout, each parameter is clearly explained using scrolling text in the display. This will make it a lot easier to browse through the Expert Modular menu, without having to consult a list of parameter numbers.

Alarm indications When an alarm is activated (for example due to a low battery state of charge), the alarm bell icon will be lit and an explanation about the type of alarm will scroll through the display.

An audible alarm can be enabled as well for additional attention.

Accessories

QuickLink to USB Communication Kit

art # 5092130

This kit enables you to control, readout and configure the Expert Modular from your Windows PC. Another possibility is to use the PC as a datalogger to record all measured parameters for further analysis.

QuickLink to RS-232 Communication Kit

art # 5092030

This kit enables you to control, readout and configure the Expert Modular from your Windows PC. Another possibility is to use the PC as a datalogger to record all measured parameters for further analysis.

QuickLink to Bluetooth

Communication Kit art # 5092230

This kit enables you to control, readout and configure the Expert Modular from an iOS or Android based mobile phone via Bluetooth. The Dashboard Mobile app is available in the Apple App Store and Google Play.

QuickLink Alarm Output Expander Kit

art # 5093120

This kit adds two additional alarm relays to the Expert Modular and can be used in case a system requires each alarm type to be assigned to a separate relay.

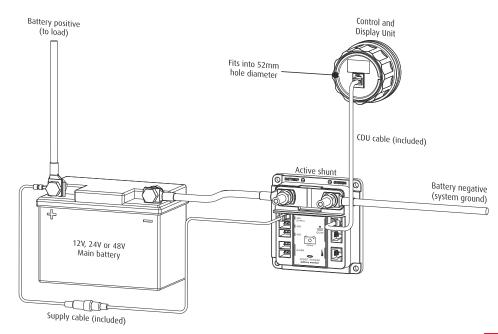

Temperature Sensor Kit 3 m

art # 5055310

By connecting the temperature sensor kit to your Expert Modular, the exact temperature of your battery can be determined, resulting in even more precise battery monitoring. Also available in 10 m length.

Wiring diagram

Example diagram of a single battery setup. Notice the small amount of cables that are needed to get the Expert Modular up and running. The supply and CDU cables are both included. Also included but not shown in this picture are rubber caps to cover unused I/O ports against polution.

When input +B1 is only used for supply and +B2 for main battery voltage measurement, the input voltage range for the main battery is 1..70Vdc

Note: the given specifications are subject to change without notice.

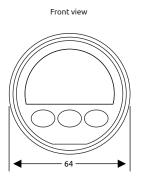

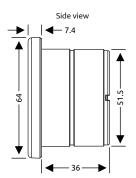

The Expert Modular active shunt base has a Grid Optimized footprint. This enables perfect system integration with busbars and fuseholders from the TBS DC Modular product lineup. The picture on the left shows a nice solution to avoid stacking all battery negative return cables on the single "System side" stud of the shunt.

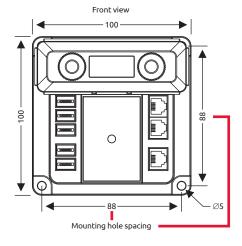

²⁾ +/- 600A is the maximum rating for 20 minutes. The continuous input current range is +/- 500A
